Allowable Subject Matter

1. Claims 6, 8, 10 and 11 are allowed.
2. The following is an examiner's statement of reasons for allowance.

The present invention is directed to a hierarchy of an operation screen and a hierarchy of a directory set to have a correspondence relation wherein changing points of the respective hierarchies reflect on the opposite hierarchies in combination with entering a password number and automatically forming a hidden directory, having a name based on the password number, in the directory hierarchy of a file server.

Each independent claim identifies the uniquely distinct features of the hierarchy of an operation screen of an image reading device set to correspond to the hierarchy of a directory in a file server for recording a scanned image to further comprise "a secret directory having a name based on the password corresponding to the preset operation hierarchy of the image reading device".

The closest prior art, applicant's admitted prior art and Barrett et al., when combined, shows a similar system which also provides a hierarchy of an operation screen and a hierarchy of a directory having a corresponding relationship. However, the prior art still fail to anticipate or render the above underlined limitations obvious, i.e. a hierarchy of an operation screen combined with a hierarchy of a directory and using the password information as a directory name in order to eliminate the need to perform password collation processing.
